DETAILED ACTION

Election/Restrictions

1. Applicant's election of group III, claims 14-17 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 1-13 and 18-37 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Groups I, II, and IV, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 16 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 16 is unclear with respect to the temperature. The claim states that the conjugation of aspartic acid to oxirane agarose takes place less than about 25oC, reacting at about 80oC for 4 hours." It is unclear what is reacted at 80oC or what temperature is required for the aspartic acid-oxirane agarose reaction to take place. Clarification is requested.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 14-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Mantovaara et al. and Porath et al.

The claims are drawn to a method of synthesizing carboxymethylated aspartate agarose chelating resin.

Mantovaara et al. teaches the synthesis of carbxymethylated aspartic acid agarose by subjecting separose 6B with epichlorohydrin (see page 316). The reference of Porath et al. states that carbohydrates such as agarose with epicholorhydrin yield oxirane-agarose (see col. 2, lines 18-28). Thus, the reaction of sepherose 6B (agarose) with epichlorohydrin yields oxirane-agarose. Mantovaara et al. then teaches resulting product is reached with aspartic acid and wahwed with a solution of NaHCO3/Na2CO3 in sodium hydroxide (see page 317). The reaction takes place at room temperature (see page 316).

Thus, the reference anticipates the claimed invention.
